

S/L: Jamie and Charlie's "Brilliant" Investment Strategy

Dear XXXX,

Have you seen *The Big Short* – the movie about the sub-prime housing crisis?

If so, you'll probably remember Mark Baum and Michael Burry – played by Steve Carrell and Christian Bale.

But there are two other characters worth paying attention to.

They're the two young guys – Jamie and Charlie – who had started with \$110,000 of their own money and, in just 4 years, had turned it into \$30,000,000.

That's a 272:1 return. In annualized terms, it's 306% profit a year.

So what was their secret?

As the movie explained,

"Their strategy was simple and brilliant.

Jamie and Charlie found markets will sell options very cheaply on things they think will never happen.

So when they were wrong, they were wrong small. But when they were right, they were right big.”

So why am I telling you this?

Right now, I’m seeing an opportunity Jamie and Charlie would love.

There’s something that – like the 2007 housing crisis – seems inevitable. But the markets disagree.

And, if you were to make a small investment of just \$1,000, it could easily turn into **\$8,771**, **\$17,543** or even **\$70,176** in just the next 4 months.

All with limited downside.

But you have to move fast.

Because once the market catches up to reality, prices will adjust and the opportunity will be gone.
